## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Snch in view of Mitrovic. Snch teaches the claimed subject matter except for sensing of multiple variables using differing frequencies to create an equivant model of the plasma circuit. The patent to Mitrovic is applied for teaching that it is conventional to create an equivant circuit using multiple sensed variables using differing frequencies and use of the same effects a more<sup>3</sup> uniform plasma processing system. In view of this teaching it would have been obvious to modify the Snch system with multiple variable and equivant circuit processing, to enhance the uniformity of the plasma produced for the processing. Use of particular models such as resistive, inductive and capacitive, as per the dependent claims is considered a matter of design for the artisan.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Collins and Flamm et al are cited for disclosing pertinent plasma control systems.
